

Planet.

Helping ecommerce to set optimal prices.

Backend Engineer

Planet is a remote startup founded in Malaga, we are focused on allowing e-commerce managers to manage their prices in an optimal way. With price management as the core of our business, Planet offers its users multiple features with which to obtain price recommendations, establish business rules and monitor competitors.

To understand better how will be your day-to-day, You Will

- Working with our current stack: Typescript, Node, Express, Puppeteer, Jest, Docker, AWS, MongoDB.
- Being responsible for developing new integrations, scraping, and other services.
- Working within your cross-functional team to uphold the highest technical standards right across the product

The process:

- CVs review: We will assess your experience through your curriculum and any other content that you provide us.
- Discovery call. A short call so that we can get to know each other.
- Technical test. You will be provided a short exercise involving the technologies that we use on a daily basis. This will help us understand how you approach work and the ease with which you can adapt to new technologies (if any).
- Video-call with the tech team. A call where we can comment the Technical test results, and discuss questions about Planet, your experience, another doubts, etc.

Requirements:

- Professional experience working in NodeJS
- Good development practices (Clean Code, SOLID, design patterns, etc.)
- Experience with Puppeteer or Scrapy
- Experience working with agile methodologies
- Testing (Jest)
- Proactive, self-responsibility and a team player

Other more than welcome skills

- Experience with AWS
- You love learning and sharing knowledge

Benefits:

- Flexible working hours
- Remote first culture
- Join a talented and young team where all ideas count
- Work with the latest methodologies, tools & technology
- Competitive salary (22-26k€, based on profile and experience) linked to the startup growth
