Senior Front End Engineer

Location: Spain, Granada

Job type: Full Time

We are creating a **new team** in our R&D center in Granada that will be developing Intuo, a **Talent Enablement Platform**. If you want to be part of this new challenge, help create a team and develop a product focused on Talent enablement, this is your opportunity – we are looking for a **Senior Front-end Engineer**

What you will do

As a front-end engineer in the Intuo product development team, you will write clean and performant **JavaScript (ES6 + Babel) in Ember.js**. The focus will be on implementing complex **UI flows while maintaining great UX**, working together with a product manager and writing unit & integration tests to complement our suite of existing tests. The successful candidate will have top technical skills, excellent attention to detail and follow-up, and the ability to self-manage.

Our current stack includes **Rails with RSpec & Capybara, Redis, Postgres, Sidekiq** on the back-end. We use **Ember.js on the front-end, and React-Native for mobile** (iOS & Android).

We will help you to become a better engineer by supporting you to set goals and have regular one on ones to work on your professional and personal development.

Your Profile

- You have solid experience in a modern **SPA framework**. We use **Ember.js**, but knowledge of the framework is not a hard requirement. Because you love **JavaScript frameworks** in general, you've probably played around with -- and probably are opinionated about -- other frameworks like React, Vue, Angular, etc;
- You write modular and clean code that is easy to test;
- You understand **RESTful APIs** and worked with a variety of them over the past years;
- You work in a cross-functional team with a product manager, back-end developer, mobile developer and a QA engineer;
- You stay up-to-date on new technologies, and know when to introduce them in the stack;
- You have a critical mindset about building a product and care about quality;
- You have an eye for detail;
- Good English skills;
- You know when to hold up a release and you can drive a compromise solution;
- You have experience working in a continuous integration environment.

We offer

High level of flexibility and independence where work/life balance is in focus - this means that you're the one responsible to manage your working hours (Flexi Time), and you can even work from home every now and then. In July and August, you can enjoy more time for yourself (36 working hours per week).

You will have access to training to develop yourself personally and professional and you will have fresh fruit and coffee every day. You will also enjoy extra days of holidays depending on your seniority (up to 28 days).

There is also time for you to have fun participating in social events organized by our Unit4Fun group, time for solidarity causes with our Unit4Cares group, time for sports with Unit4Moves and time to be conscious about the role of women in technology with our Business Women Network.
