

OFERTA DE TRABAJO

Empresa: Topshore (www.TopShore.com)

Puesto de trabajo:

Electrical Power Engineer in the Netherlands

Perfil solicitado: Grado y/o Master Ingeniería Eléctrica.

Descripción del trabajo:

As an Electrical Power Engineer, you will be part of a dedicated project team comprising several engineers, each with their own field of expertise

Together with the Lead Engineer, you will plan your schedule for the upcoming period, starting with basic engineering and followed by the detailed engineering of each system. You will collect all the necessary technical information and functional specifications needed to successfully fulfil your duties. In addition, you will always keep classification rules and customer requirements in mind. In this role, you will be responsible for the calculations for various onboard systems and produce a wide range of technical documents, including:

- Overall single-line drawings
- Multi-line drawings of electrical cabinets, such as main switchboards, frequency drives and cable block/cable connection diagrams
- Cabinet layout drawings
- Technical specifications for quotations and purchasing
